

Curtins Consulting Project The Triangle Reaches Completion

11.11.2011

For immediate Release

The Triangle, a high quality, sustainable 42-home residential development for which Curtins Consulting provided structural and infrastructure engineering services for Hab/Oakus, sees its first occupants move in.

The Level 4 Code for Sustainable Homes scheme in Swindon has now reached completion. Curtins Consulting played a major role in the design of the development, joining forces with Hab Oakus – the partnership between Kevin McCloud’s development company Hab and housing group GreenSquare.

Curtins were instrumental in the design of the development, which included providing a carbon negative solution for the external walls using Hemcrete which utilises hemp grown specifically for the project. Additionally, Curtins designed a sustainable drainage system which incorporates surface water recycling.

Curtins’ Director for this project Paul Menzies comments, “Curtins are delighted to see The Triangle project completed, as it is yet another example of how Curtins’ innovative approaches and solutions can benefit a client and assist a project reaching Level 4 in the Code for Sustainable Homes.”.

Curtins Consulting have also been appointed to act as Structural Engineers on four further housing schemes with Hab/Oakus – Cashes Green, a 78-home redevelopment of a hospital site in Stroud and three projects in Oxford to provide 109 new homes and state-of-the-art community facilities.

Notes for Editors:

About Curtins

Curtins Consulting is one of the UK’s leading independent Consulting Engineers having specialised in building structures for over 50 years. Curtins understands the fundamentals of all stages of design, construction and operation including risk, cost, sustainability and build ability, enabling them to deliver economical, functional and inspirational designs that meet the needs of its clients and users. Across 11 offices nationwide, Curtins has a team of well-rounded and highly experienced individuals who are dedicated to working closely with clients throughout the lifecycle of the project to achieve the best possible results.
